

Conservation Status Assessment

Scientific Name: *Bridgeoporus nobilissimus*

Classification: Fungus

Assessment area: Oregon

Heritage Rank: **S2**

Rank Date: 3/9/2017

Rank Reasons: Fair number of occurrences, but none in protected areas and many are clustered.

Range Extent: E = 5,000-20,000 sq km (~2,000-8,000 sq mi)

Comments: Around 12,000 sq. km. Northwest corner of Oregon.

Population Size: Not assessed

Comments: None

Number of Occurrences: C = 21 - 80

Comments: Many occurrence clustered, around 50. A recent study (Gordon and Van Norman 2015) used molecular techniques to sample for this species in stumps and trees without visible conks (basidiocarps). The researchers found the fungal DNA in numerous trees that did not have basidiocarps. This suggests that this species may be more common than the presence of basidiocarps indicates. However all samples were taken from stands with visible basidiocarps on some trees so this study did not conclusively demonstrate that there are occurrences of this species that could not be located based on the presence of basidiocarps. (Gordon, M., K. Van Norman 2015. *Bridgeoporus nobilissimus* is much more abundant than indicated by the presence of basidiocarps in forest stands. *North American Fungi* 10 (3) : 1 - 28)

Area of Occupancy: E = 26-125 4-km² grid cells

Comments: Around 55, many occurrences clustered.

Good Viability: A = No occurrences with excellent or good (A or B) viability or ecological integrity

Comments: No occurrences in protected areas.

Environmental Sensitivity: Not Evaluated

Comments: None

Short Term Trends: Not Evaluated

Comments: None

Long Term Trends: Not Evaluated

Comments: None

Threat Impact: C = Medium

Comments:

All occurrences are at risk from logging, none in protected areas. Many are clustered so if the area were logged many occurrences may be affected.

Intrinsic Vulnerability: Not Evaluated

Comments: None

Calculated Rank: S2

Rank Author: Caitlin Lawrence

Rank Reviewer: Lorelei Norvell

References:

No additional references listed.

Definitions and Resources:

Rank Prefixes

G Global rank, applied to taxon's full geographic range

S State rank, applied to taxon's range within the designated state

Rank Values

1 Critically imperiled

2 Imperiled

3 Vulnerable

4 Apparently secure, uncommon but not rare

5 Secure, common, abundant, and widespread
