

This is an example of the Oregon Biodiversity Information Center's rare, threatened, and endangered species spatial coverage. Species names have been masked for the purposes of this example. Subscription to ORBIC's statewide coverage includes the statewide shapefile shown here, or a file geodatabase, as well as the attribute information containing data about each species occurrence. One mid-year update of the spatial data is included with an annual subscription. Spatial results can also be an add-on service to a site-specific data search (fee is the additional staff time needed to prepare the file). To request an annual subscription or to make a site-specific data request, see <http://orbic.pdx.edu/data-request.html> or contact us at inrdata@pdx.edu or 503-725-9952. (April 27 2012)
