Conservation Status Assessment

Scientific Name: Aleurodiscus farlowii
Classification: Fungus
Assessment area: Washington

Heritage Rank: S1?
Rank Date: 3/9/2017

Rank Reasons: Very few occurrences and unknown trends. Generally little known about this species.

Range Extent: A = <100 sq km (< ~40 sq mi)
Comments: Only a very narrow band of range based on the two observations in WA.

Population Size: Not assessed
Comments: None

Number of Occurrences: A = 1 - 5
Comments: 1 occurrence 8 km away from a cluster of 2 other collections. Maybe one additional "site 26" unconfirmed. In 2002 Lorelei L Norvell noted "Known from only 3 sites in Washington, but only one site noted in Castellano et al., Norvell 1995, and ISMS 2002 database. Locations also electronically noted in BPI (November 18, 2002) and NYBG (November 2002). An unrecorded collection was verified by Dr. J Ginns at a PNW Key Council foray from Lake Kachess on September 14, 2001 (Norvell, pers. comm. November 18, 2002)"

Area of Occupancy: B = 2 4-km2 grid cells
Comments: None

Good Viability: A = No occurrences with excellent or good (A or B) viability or ecological integrity
Comments: Locations are in National forests but unprotected.

Environmental Sensitivity: Not Evaluated
Comments: None

Short Term Trends: Not Evaluated
Comments: None

Long Term Trends: Not Evaluated
Comments: None

Threat Impact: B = High
Comments:
The threat is high due to there only being 2 occurrences and they are only 8 km apart, and not in protected areas.

**Intrinsic Vulnerability:** Not Evaluated

**Calculated Rank:** S1

**Rank Author:** Caitlin Lawrence
**Rank Reviewer:** Lorelei Norvell
