

Heritage Ranking Form - State Rank

Scientific Name: Amanita armillariiformis

Common Name: Fungus

Classification: Fungus

Range Extent: F = 20,000-200,000 sq km (~8,000-80,000 sq mi)

Comments: 8750 square miles. Area measured is intersection of Basin and Range ecoregion and Malheur County

Area of Occupancy: C = 3-5 4-km² grid cells

Comments: 3 sites; 3 grid cells

Number of Occurrences: A = 1 - 5

Comments: 3 occurrences

Population Size: U = Unknown

Comments: No information provided on collections

Good Viability: U = Unknown

Comments: None

Environmental Specificity: B = Narrow. Specialist or community with key requirements common

Comments: Ectomycorrhizal, probably on Salix (Dewey 2009)

Short Term Trends: U = Unknown

Comments: None

Long Term Trends: U = Unknown

Comments: None

Threat Impact: C = Medium

Comments: Probably associated with Salix which is associated with riparian areas which can be heavily impacted by grazing and other activities

**Intrinsic
Vulnerability:** Not Evaluated

Comments: None

Heritage Rank: S2

Comments: Only known from 3 sites, associated with riparian and wetter areas in far eastern edge of the state in areas; threatened by cattle grazing.

Rank Notes: None
