Conservation Status Assessment

Scientific Name: Asterophora lycoperdoides
Classification: Fungus
Assessment area: Global

Heritage Rank: G4
Rank Date: 3/9/2017

Rank Reasons: Widespread, many occurrences and maybe under collected.

Range Extent: H = >2,500,000 sq km (> 1,000,000 sq mi)

Comments: Wide range, across North America, found in Costa Rica, and some European occurrences as well.

Population Size: Not assessed

Comments: None

Number of Occurrences: D = 81 - 300

Comments: Large number of records. Some are very old but there are many recent occurrences as well. Camacho 2002 also stated: "This is a small fungus that is easily overlooked. It will only be found on rotting species of Russula which are often ignored. It is apparently found throughout the Northern Hemisphere. All the collections of the current ISMS were very recent. I have seen species of Asterophora (of which there are only two) at the Eugene mushroom show every year that I was there (4)."

Area of Occupancy: F = 126-500 4-km2 grid cells

Comments: Found across a wide range, clustered occurrences covering multiple grid cells.

Good Viability: D = Some (13-40) occurrences with excellent or good viability or ecological integrity

Comments: Found in Mount Rainier State Park, Fort Defiance State Park, West Branch State Park, Great Smoky Mountains National Park, Afton State Park, Cantwell Cliffs State Park, Old Man's Cave State Park, Day Pond State Park, Jedediah Smith Redwoods State Park, Gordon Bay Provincial Park, Yellowstone National Park

Environmental Sensitivity: Not Evaluated

Comments: None

Short Term Trends: Not Evaluated

Comments: None

Long Term Trends: Not Evaluated
Comments: None

**Threat Impact:**

C = Medium

Comments:
Fair number of occurrences in protected areas. Those not at risk of logging.

**Intrinsic Vulnerability:**

Not Evaluated

Comments: None

**Calculated Rank:**

G4
