**Oregon Status Factors**

**Elcode**  
NFSM000029

**Gname**  
CLAVARIADELPHUS SUBFASTIGIATUS

**Number of Occurrences**  
B = 6 - 20  
Comments  
There are 8 records from Oregon.

**Number of Occurrences with Good Viability**  
B = Very few (1-3) occurrences with good viability  
Comments  
There are 3 occurrences in protected sites.

**Population Size**  
A = 1-50 individuals  
Comments

**Range Extent**  
F = 20,000-200,000 km² (about 8,000-80,000 square miles)  
Comments  
Known from western Oregon.

**Area of Occupancy**  
A = <0.4 km² (less than about 100 acres)  
LA = <4 km (less than about 2.5 miles)  
Comments

**Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences**  
U = Unknown. Long-term trend in population, range, area occupied, or number or condition of occurrences unknown

Comments

**Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences**  
U = Unknown. Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.

Comments
Threats
C = Substantial, non-imminent threat. Threat is moderate to severe but not imminent (> 10 years) for most of the population, occurrences, or area.

Scope  High   Severity  High   Immediacy  Unknown

Comments This is a mycorrhizal species susceptible to logging activities.

Number of Appropriately Protected and Managed Occurrences
B = Few (1-3) occurrences appropriately protected and managed

Comments There are 3 occurrences in protected sites.

Intrinsic Vulnerability
A = Highly Vulnerable. Species is slow to mature, reproduces infrequently, and/or has low fecundity such that populations are very slow (> 20 years or 5 generations) to recover from decreases in abundance; or species has low dispersal capability such that extirpated populations are unlikely to become reestablished through natural recolonization (unaided by humans). Ecological community occurrences are highly susceptible to changes in composition and structure that rarely if ever are reversed through natural processes even over substantial time periods (> 100 years).

Comments This is a mycorrhizal species susceptible to logging activities.

Environmental Specificity
B = Narrow. Specialist or community with key requirements common.

Comments Mycorrhizal species

Other Considerations
ORNHIC List 3

Edition 11/12/2002  Edauthor Efren Cazares

Grank S2?  Grank Date 11/12/2002

Greasons
This species is uncommon throughout its range. 3 out of 8 occurrences are in protected sites. Also, this is a mycorrhizal species vulnerable to logging activities.
