Washington Status Factors

Elcode  IMGAS87020
Gname  DEROCERAS HESPERIUM
Gcomname  EVENING FIELDSLUG

Number of Occurrences
A  = 1 - 5
Comments  This slug has been reported from only one general area, the northern Olympic Peninsula (Burke et al., 1999).

Number of Occurrences with Good Viability
B  = Very few (1-3) occurrences with good viability
Comments  Current information, or lack thereof, indicates that this is truly a rare species. Although the areas in which it should be expected have been surveyed (lightly), Deroceras hesperium has been found poorly represented relative to other gastropods.

Population Size
U  = Unknown
Comments

Range Extent
C  = 250-1,000 km² (about 100-400 square miles)
Comments  Low to mid-elevations in the western Cascade Range, through western Washington. Washington: Clallam County (Kelley et al., 1999). The historic range of Deroceras hesperium goes through Western Washington (Burke et al., 1999). Pilsbry (1948) notes that it is to be expected to exist throughout the humid coastal region of the northwest.

Area of Occupancy
C  = 4-20 km² (about 1,000-5,000 acres)
LC  = 40-200 km (about 25-125 miles)
Comments  This slug has been reported from only one general area, the northern Olympic Peninsula (Burke et al., 1999).

Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
C  = Substantial Decline (decline of 50-75%)
Comments  Pilsbry (1948) referred to many specimens opened by him, and at least multiple specimens from each locality, but all “collected over 50 years ago....” However, Branson (1977) found only three specimens in his surveys of the Olympic Mountains and none in his surveys of the Washington Cascades (Branson, 1980) or Oregon Cascades and Coast Ranges (Branson and Branson, 1984).
Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences

U = Unknown. Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.

Comments

Threats

U = Unknown. The available information is not sufficient to assign degree of threat as above. (Severity, scope, and immediacy are all unknown, or mostly [two of three] unknown or not assessed [null].)

Comments A major concern would be loss of occupied habitat from human activities. Exact locations of the known sites are uncertain, so inadvertent destruction of these habitats and any currently unknown populations, before they are discovered and their requirements determined, is a highly potential risk (Burke et al., 1999).

Number of Appropriately Protected and Managed Occurrences

B = Few (1-3) occurrences appropriately protected and managed

Comments One of the sites from which Deroceras hesperium is known is near a campground in Olympic National Park. Another of the sites is on the Makah Indian Reservation, which may or may not be protected. The seventh location is in Canada (Burke et al., 1999) and it is unknown as to whether that site is protected.

Intrinsic Vulnerability

U = Unknown

Comments Deroceras hesperium is one of the least known slugs in the Western United States (Burke et al., 1999).

Environmental Specificity

C = Moderate. Generalist or community with some key requirements scarce.

Comments May be associated with a variety of low vegetation, litter, and debris. Rocks also may be used. Little is known about this species and its habitat (Kelley et al., 1999). Branson (1977) found two slugs of this species in hemlock, grand fir, maples, ferns and mosses at 610 meters (2000 feet) elevation, and one among hemlock, black cottonwood, spruce and salmon berry at 8 meters (26 feet) above sea level. In general, gastropods are found under rocks or logs and among talus, litter, debris, and ground vegetation, and these microsites should be considered the places in which to expect this species. Deroceras hesperium is apparently also found in quite moist sites and may be associated with riparian habitats, although there is no evidence that it is a riparian obligate (Burke et al., 1999).

Other Considerations

Grank S1 Grank Date 4/1/2004

Greasons

This slug has been reported from only one general area, the northern Olympic Peninsula (Burke et al., 1999).
