Oregon Status Factors

Elcode    NLIC001230
Gname     FUSCOPANNARIA PACIFICA
Gcomname

Number of Occurrences
E  =  >300
Comments  Most reports of Pannaria saubinetii in the US are in fact Fuscopannaria pacifica.

Number of Occurrences with Good Viability
F  =  Very many (>125) occurrences with good viability
Comments  Nearly all occurrences seen are viable, covering one whole side of tree base (pers. comm. Stone 2002).

Population Size
H  =  >1,000,000 individuals
Comments  Impossible to know what constitutes an 'individual,'

Range Extent
F  =  20,000-200,000 km² (about 8,000-80,000 square miles)
Comments  West Cascades ecoregion = approximately 28,900 square km.

Area of Occupancy
H  =  >20,000 km² (greater than 5,000,000 acres)
LH  =  >200,000 km (greater than 125,000 miles)
Comments  In its range it is locally common (Jorgensen 2000).

Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
E  =  Relatively Stable (±25% change)
Comments

Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
E  =  Stable.  Population, range, area occupied, and/or number or condition of occurrences unchanged or remaining within ±10% fluctuation
Comments
**Threats**

H = Unthreatened. Threats if any, when considered in comparison with natural fluctuation and change, are minimal or very localized, not leading to significant loss or degradation of populations, occurrences, or area even over a few decades’ time. (Severity, scope, and/or immediacy of threat considered Insignificant.)

Comments

In southern OR the tree species favored as habitat is Arbutus menziesii, a tree frequently cleared from forests (D. Stone, pers. comm.).

**Number of Appropriately Protected and Managed Occurrences**

E = Very many (>40) occurrences appropriately protected and managed

Comments

**Intrinsic Vulnerability**

C = Not Intrinsically Vulnerable. Species matures quickly, reproduces frequently, and/or has high fecundity such that populations recover quickly (< 5 years or 2 generations) from decreases in abundance; or species has high dispersal capability such that extirpated populations soon become reestablished through natural recolonization (unaided by humans). Ecological community occurrences are resilient or resistant to irreversible changes in composition and structure and quickly recover (within 10 years).

Comments

**Environmental Specificity**

B = Narrow. Specialist or community with key requirements common.

Comments

Moist forest, Pacific Coast.

**Other Considerations**

**New Sources**
