

Conservation Status Assessment

Scientific Name: *Gastroboletus ruber*

Classification: Fungus

Assessment area: Oregon

Heritage Rank: **S3**

Rank Date: 3/9/2017

Rank Reasons: Around 11 occurrences in Oregon, about half of which are in protected areas.

Range Extent: F = 20,000-200,000 sq km (~8,000-80,000 sq mi)

Comments: Range of around 23,000 sq. km. Found mostly in the Cascade range with one occurrence in the Siuslaw National Forest.

Population Size: Not assessed

Comments: None

Number of Occurrences: B = 6 - 20

Comments: 11 occurrences in Oregon.

Area of Occupancy: D = 6-25 4-km² grid cells

Comments: Around 17 occupied grid cells.

Good Viability: C = Few (4-12) occurrences with excellent or good viability or ecological integrity

Comments: 5 occurrences are in protected areas.

Environmental Sensitivity: Not Evaluated

Comments: None

Short Term Trends: Not Evaluated

Comments: None

Long Term Trends: Not Evaluated

Comments: None

Threat Impact: CD = Medium - Low

Comments:

Around half of the occurrences are in protected areas, 5 of 11. If the unprotected areas are logged on a 40 year rotation, about 14% would be affected in 10 years and possibly 55% in 100 years. Additionally, in 2002 assessment Camacho said: "This is a mycorrhizal species it is dependent on a host tree for its carbohydrates. Studies have shown that if the tree is killed the mycorrhizal fungi die shortly after. The one possibly saving feature of this species is the spore bank. However, nothing is known about the spore bank of this species. This species is often erumpent and easily seen in the low density underbrush forests that it occurs in. There have been several recent new locations in Washington, an area not as well examined for sequestrate species of fungi. I believe there will be many more."

Intrinsic Vulnerability: Not Evaluated

Comments: None

Calculated Rank: S3

Rank Author: Caitlin Lawrence

Rank Reviewer: Scot Loring

Definitions and Resources:

Rank Prefixes

- G Global rank, applied to taxon's full geographic range
- S State rank, applied to taxon's range within the designated state

Rank Values

- 1 Critically imperiled
- 2 Imperiled
- 3 Vulnerable
- 4 Apparently secure, uncommon but not rare
- 5 Secure, common, abundant, and widespread
