Oregon Status Factors

Elcode   NFSM000075
Gname    GAUTIERIA MAGNICELLARIS
Gcomname

Number of Occurrences
A  = 1 - 5
Comments Only in one site in Oregon.

Number of Occurrences with Good Viability
A  = No (A- or B- ranked) occurrences with good viability
B  = Very few (1-3) occurrences with good viability
Comments

Population Size
A  = 1-50 individuals
Comments

Range Extent
A  = <100 km² (less than about 40 square miles)
Comments Only in one site in Oregon.

Area of Occupancy
A  = <0.4 km² (less than about 100 acres)
LA  = <4 km (less than about 2.5 miles)
Comments

Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
U  = Unknown.  Long-term trend in population, range, area occupied, or number or condition of occurrences unknown
Comments

Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
U  = Unknown.  Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.
Comments
**Threats**

E = Localized substantial threat. Threat is moderate to severe for a small but significant proportion of the population, occurrences, or area. Ecological community occurrences are directly impacted over a small area, or in a small portion of their range, but threats require a long-term recovery.

**Comments**

This is a mycorrizhal species it is dependent on a host tree for its carbohydrates. Studies have shown that if the tree is killed the mycorrizhal fungi die shortly after. The one possibly saving feature of this species it the spore bank. However, nothing is known about the spore bank of this species.

**Number of Appropriately Protected and Managed Occurrences**

B = Few (1-3) occurrences appropriately protected and managed

**Comments**

**Intrinsic Vulnerability**

U = Unknown

**Comments**

**Environmental Specificity**

A = Very Narrow. Specialist or community with key requirements scarce.

**Other Considerations**

ORNHIC - List 3 (Review). The specimens in the Western U.S. are probably a different species, not G. magnicellaris, so it the taxonomy makes it impossible to rank the northwest species.

**Edition**

**Greasons**

Only in one site in Oregon. However this is probably not an easy species to distinguish from other Gautieria species. In addition it is not an easy species to see because it is hypogeous. Due to the potential mis-identifications, this might also be considered to be an SU.
