

Oregon Status Factors

Elcode NFSM000076

Gname GAUTIERIA OTTHII

Gcomname

Number of Occurrences

A = 1 - 5

Comments Only in one site in Oregon.

Number of Occurrences with Good Viability

A = No (A- or B- ranked) occurrences with good viability

B = Very few (1-3) occurrences with good viability

Comments

Population Size

A = 1-50 individuals

Comments

Range Extent

A = <100 km² (less than about 40 square miles)

Comments Only in one site in Oregon.

Area of Occupancy

A = <0.4 km² (less than about 100 acres)

LA = <4 km (less than about 2.5 miles)

Comments

Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences

U = Unknown. Long-term trend in population, range, area occupied, or number or condition of occurrences unknown

Comments

Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences

U = Unknown. Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.

Comments

Threats

B = Moderate and imminent threat. Threat is moderate to severe and imminent for a significant proportion (20-60%) of the population, occurrences, or area. Ecological community occurrences are directly impacted over a moderate area, either causing irreversible damage or requiring a long-term recovery.

Scope Moderate **Severity** Moderate **Immediacy** Moderate

Comments This is a mycorrhizal species it is dependent on a host tree for its carbohydrates. Studies have shown that if the tree is killed the mycorrhizal fungi die shortly after. The one possibly saving feature of this species is the spore bank. However, nothing is known about the spore bank of this species

Number of Appropriately Protected and Managed Occurrences

A = None. No occurrences appropriately protected and managed

Comments

Intrinsic Vulnerability

U = Unknown

Comments

Environmental Specificity

B = Narrow. Specialist or community with key requirements common.

Comments Only in one site in Oregon.

Other Considerations

ORNHIC - List 3 (Review). The specimens in the Western U.S. are probably a different species, not *G. otthii*, so the taxonomy makes it impossible to rank the northwest species

Edition 11/12/2002 **Edauthor** Francisco J. Camacho

Grank SU **Grank Date** 11/12/2002

Reasons

Only in one site in Oregon. However this is probably not an easy species to distinguish from other *Gautieria* species. In addition it is not an easy species to see because it is hypogeous. Due to the potential mis-identifications, this might also be considered to be an SU.
