# Heritage Rank Status Factors 

Elcode NFSM000097
Gname LEUCOGASTER MICROSPORUS
Gcomname

## Number of Occurrences

B = 6-20
Comments Known from 10 collections.

## Number of Occurrences with Good Viability

B = Very few (1-3) occurrences with good viability
$C=$ Few (4-12) occurrences with good viability
Comments

## Population Size

$\mathrm{A}=1-50$ individuals
Comments

## Range Extent

$\mathrm{E}=5,000-20,000 \mathrm{~km} 2$ (about 2,000-8,000 square miles)
Comments Oregon, southern Washington, and northern California.

## Area of Occupancy

$\mathrm{A}=<0.4 \mathrm{~km} 2$ (less than about 100 acres)
$\mathrm{LA}=<4 \mathrm{~km}$ (less than about 2.5 miles)
Comments

Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
$\mathrm{U}=$ Unknown. Long-term trend in population, range, area occupied, or number or condition of occurrences unknown

Comments

## Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences

$\mathrm{U}=$ Unknown. Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.
Comments

## Threats

$\mathrm{E}=$ Localized substantial threat. Threat is moderate to severe for a small but significant proportion of the population, occurrences, or area. Ecological community occurrences are directly impacted over a small area, or in a small portion of their range, but threats require a long-term recovery.

Scope Low Severity Moderate Immediacy Moderate
Comments This is a mycorrizhal species; it is dependent on a host tree for its carbohydrates. Studies have shown that if the tree is killed the mycorrizhal fungi die shorty after. The one possibly saving feature of this species is the spore bank. However, nothing is known about the spore bank of this species.

## Number of Appropriately Protected and Managed Occurrences

C $=$ Several (4-12) occurrences appropriately protected and managed
Comments

## Intrinsic Vulnerability

U = Unknown
Comments

## Environmental Specificity

B = Narrow. Specialist or community with key requirements common.
Comments

## Other Considerations

National Rank - N3

| Edition | 11/13/2002 | Edauthor | Francisco J. Camacho |

| Grank | G3 | Grank Date | $11 / 13 / 2002$ |

## Greasons

Endemic to the Pacific Northwest. This seems to be abundant in lower elevation Pseudotsuga forests. I have seen it several times from sites not in the database.
