

# Oregon Status Factors

**Elcode** NFSM000100  
**Gname** MACOWANITES MOLLIS  
**Gcomname**

## Number of Occurrences

A = 1 - 5

Comments Known from one site.

## Number of Occurrences with Good Viability

A = No (A- or B- ranked) occurrences with good viability

B = Very few (1-3) occurrences with good viability

Comments

## Population Size

A = 1-50 individuals

Comments

## Range Extent

A = <100 km<sup>2</sup> (less than about 40 square miles)

Comments Known from one site.

## Area of Occupancy

A = <0.4 km<sup>2</sup> (less than about 100 acres)

LA = <4 km (less than about 2.5 miles)

Comments

## Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences

U = Unknown. Long-term trend in population, range, area occupied, or number or condition of occurrences unknown

Comments

## Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences

U = Unknown. Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.

Comments

## Threats

E = Localized substantial threat. Threat is moderate to severe for a small but significant proportion of the population, occurrences, or area. Ecological community occurrences are directly impacted over a small area, or in a small portion of their range, but threats require a long-term recovery.

Scope Low

Severity Moderate

Immediacy Moderate

**Comments** This is a mycorrhizal species; it is dependent on a host tree for its carbohydrates. Studies have shown that if the tree is killed the mycorrhizal fungi die shortly after. The one possibly saving feature of this species is the spore bank. However, nothing is known about the spore bank of this species.

## Number of Appropriately Protected and Managed Occurrences

B = Few (1-3) occurrences appropriately protected and managed

**Comments**

## Intrinsic Vulnerability

U = Unknown

**Comments**

## Environmental Specificity

B = Narrow. Specialist or community with key requirements common.

**Comments**

## Other Considerations

ORNHIC - List 1

**Edition** 11/17/2002

**Edauthor** Francisco J. Camacho

**Grank** S1

**Grank Date** 11/17/2002

## Reasons

Known from one site. This is a low elevation species. It occurs in the foothills surrounding the Willamette Valley. This area is well surveyed for truffle-like fungi. Since it has only been found once, it is rare.
