Conservation Status Assessment

**Scientific Name:** *Pachycudonia monticola*

**Classification:** Fungus

**Assessment area:** Oregon

**Heritage Rank:** S3

**Rank Date:** 2/8/2018

Rank Reasons: Around 50 sites across the west side of the state, 2 in a protected area.

**Range Extent:**

\[ F = 20,000-200,000 \text{ sq km} (\sim 8,000-80,000 \text{ sq mi}) \]

Comments: Around 63,000 sq. km range. Found on the west side of the state.

**Population Size:** Not assessed

Comments: None

**Number of Occurrences:**

\[ C = 21 - 80 \]

Comments: Around 45 occurrences in Oregon with an addition six sites from survey and manage records.

**Area of Occupancy:**

\[ E = 26-125 \text{ 4-km2 grid cells} \]

Comments: Around 55 occupied grid cells. A few clusters of occurrences.

**Good Viability:**

\[ B = \text{Very few (1-3) occurrences with excellent or good viability or ecological integrity} \]

Comments: Only 2 occurrences in protected areas. One occurrence in Copper Salmon Wilderness, one in Mount Jefferson Wilderness.

**Environmental Sensitivity:** Not Evaluated

Comments: None

**Short Term Trends:** Not Evaluated

Comments: None

**Long Term Trends:** Not Evaluated

Comments: None

**Threat Impact:**

\[ C = \text{Medium} \]

Comments:
2 occurrences in protected areas. Others could be at risk from logging or other development. Weber in the 2002 survey said "Mostly found in mature moist coniferous forests and typically associated with very rotten wood which may be buried. Thus ground-disturbing activities that reduce the amount of rotting wood and interrupt the addition of fresh wood to rot could impact the species. Other threats include logging, thinning, or other activities that would change the humidity, light patterns, and composition of the habitats."

**Intrinsic Vulnerability:** Not Evaluated

**Comments:** None

**Calculated Rank:** S3

**Rank Author:** Caitlin Lawrence; Lindsey Wise

**Rank Reviewer:** Scot Loring; Lindsey Wise
