Oregon Status Factors

Elcode     NLSM000011
Gname      PANNARIA SAUBINETII
Gcomname

Number of Occurrences
U = Unknown
Comments

Number of Occurrences with Good Viability
U = Unknown what number of occurrences with good viability
Comments

Population Size
U = Unknown
Comments

Range Extent
U = Unknown
Comments   In North America, this is a rare species of which only a few correctly identified specimens have been located.

Area of Occupancy
U = Unknown
LU = Unknown
Comments

Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
U = Unknown. Long-term trend in population, range, area occupied, or number or condition of occurrences unknown
Comments

Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences
U = Unknown. Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.
Comments
**Threats**

U = Unknown. The available information is not sufficient to assign degree of threat as above. (Severity, scope, and immediacy are all unknown, or mostly [two of three] unknown or not assessed [null].)

Scope Unknown  Severity Unknown  Immediacy Unknown

Comments Found on the bases of large trees; forest practices may be a threat.

**Number of Appropriately Protected and Managed Occurrences**

Comments

**Intrinsic Vulnerability**

B = Moderately Vulnerable. Species exhibits moderate age of maturity, frequency of reproduction, and/or fecundity such that populations generally tend to recover from decreases in abundance over a period of several years (on the order of 5-20 years or 2-5 generations); or species has moderate dispersal capability such that extirpated populations generally become reestablished through natural recolonization (unaided by humans). Ecological community occurrences may be susceptible to changes in composition and structure but tend to recover through natural processes given reasonable time (10-100 years).

Comments

**Environmental Specificity**

B = Narrow. Specialist or community with key requirements common.

Comments Restricted to certain moisture regime; found only at the bases of trees in most locations.

**Other Considerations**

ORNHIC - Not listed. The genus was recently revised by Jorgensen (2000) and it was discovered that most of what occurs in the PNW is Fuscopannaria pacifica. All North American records of P. saubinetii must be re-examined. True P. saubinetii is apparently rare in North America.
