

Species Data:	Index Result:
Species <i>Phacelia inundata</i>	Highly Vulnerable
English Name Playa phacelia	Confidence Low
Taxonomic Group Vascular Plant	(based on entered data)
Geographic Area SE Oregon	
	GRank G2
Cave/Ground Water Obligate No	SRank 0
Migratory area included in assessment: No	Assessor Lindsey Wise

Climate Change Vulnerability Index Values: (greatest shown when range was selected)

Data sources and notes:

Climate and precipitation data from Climate Wizard using the A1B emissions scenario and ensemble average general circulation model. Historical = past 50 years; Future = mid-century (2050s). Species data from ORBIC database. Assessment performed in conjunction with the Element Rank Calculator. Legend and Definitions

Affect to Vulnerability:
GI = Greatly increase
Inc = Increase
SI = Somewhat increase
N = Neutral
U = Unknown

Index Scores:

Extremely Vulnerable: Abundance and/or range extent within geographical area assessed extremely likely to substantially decrease or disappear by 2050.

Highly Vulnerable: Abundance and/or range extent within geographical area assessed likely to decrease significantly by 2050.

Moderately Vulnerable: Abundance and/or range extent within geographical area assessed likely to decrease by 2050.

Less Vulnerable: Available evidence does not suggest that abundance and/or range extent within the geographical area assessed will change (increase/decrease) substantially by 2050. Actual range boundaries may change.

Insufficient Evidence: Information entered about a species' vulnerability is inadequate to calculate an Index score.
