

Heritage Ranking Form - State Rank

Scientific Name: Phaeocollybia lilacifolia

Common Name: Fungus

Classification: Fungus

Range Extent: E = 5,000-20,000 sq km (~2,000-8,000 sq mi)

Comments: Estimated between 3000-7000 sq. mi., from Larch Mt., Multnomah County, to Pacific City, Tillamook County, south to Lane County (unknown site).

Area of Occupancy: CD = 3-25 4-km² grid cells

Comments: 6-7 grid cells, 6-7 sites

Number of Occurrences: B = 6 - 20

Comments: 6-7 occurrences

Population Size: U = Unknown

Comments: None

Good Viability:

Comments: None

Environmental Specificity: B = Narrow. Specialist or community with key requirements common

Comments: Mycorrhizal, found under Abies, Picea, and Tsuga (Norvell and Exeter 2008)

Short Term Trends: U = Unknown

Comments: None

Long Term Trends: U = Unknown

Comments: None

Threat Impact: C = Medium

Comments: This species grows in moist coniferous forests of the Pacific Northwest which have been primarily managed for timber production.

**Intrinsic
Vulnerability:** Not Evaluated

Comments: None

Heritage Rank: S2S3

Comments: Range extent within Oregon is rather broad but no detailed information on the limited records that have been reported.

Rank Notes: None
