

	Species Data:	Index Result:
Species	<i>Pleuropogon oregonus</i>	Extremely Vulnerable
English Name	Oregon semaphore grass	Confidence Moderate
Taxonomic Group	Vascular Plant	(confidence in species information)
Geographic Area	Eastern Oregon (east of Cascade Crest)	
Range Rel.	Entire range	Assessor Lindsey Wise
Cave/Ground Water Obligate	No	
GRank	G1G2	
SRank	S1S2

GI = Greatly Increase
Inc = Increase
SI = Somewhat Increase
N = Neutral
SD = Somewhat Decrease
Dec = Decrease
U = Unknown

Index Scores:

EV - Extremely Vulnerable: Abundance and/or range extent within geographical area assessed extremely likely to substantially decrease or disappear by 2050.

HV - Highly Vulnerable: Abundance and/or range extent within geographical area assessed likely to decrease significantly by 2050.

MV - Moderately Vulnerable: Abundance and/or range extent within geographical area assessed likely to decrease by 2050.

PS - Not Vulnerable/Presumed Stable: Available evidence does not suggest that abundance and/or range extent within the geographical area assessed will change (increase/decrease) substantially by 2050. Actual range boundaries may change.

IL - Not Vulnerable/Increase Likely: Available evidence suggests that abundance and/or range extent within geographical area assessed is likely to increase by 2050.

Assessment Notes: Climate and precipitation data from Climate Wizard using the A1B emissions scenario and ensemble average general circulation model. Historical = past 50 years; Future = mid-century (2050s). Species data from ORBIC database. Assessment performed in conjunction with the Element Rank Calculator.
