Heritage Conservation Status Factors

**Elcode**
NLSM000013

**Gname**
PSEUDOCYPHELARIA PERPETUA

**Gcomname**

**Number of Occurrences**

A = 1 - 5

Comments

**Number of Occurrences with Good Viability**

B = Very few (1-3) occurrences with good viability

Comments  Cape Perpetua, OR is only known large occurrence in the U.S.

**Population Size**

A = 1-50 individuals
B = 50-250 individuals

Comments

**Range Extent**

A = <100 km$^2$ (less than about 40 square miles)
B = 100-250 km$^2$ (about 40-100 square miles)

Comments  In OR, the only large populations are from the Cape Perpetua area.

**Area of Occupancy**

B = 0.4-4 km$^2$ (about 100-1,000 acres)

LB = 4-40 km (about 2.5-25 miles)

Comments

**Long-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences**

U = Unknown.  Long-term trend in population, range, area occupied, or number or condition of occurrences unknown

Comments  Newly described.

**Short-term Trend in Population Size, Extent of Occurrence, Area of Occupancy, and/or Number or Condition of Occurrences**

U = Unknown.  Short-term trend in population, range, area occupied, and number and condition of occurrences unknown.

Comments
Threats
H = Unthreatened. Threats if any, when considered in comparison with natural fluctuation and change, are minimal or very localized, not leading to significant loss or degradation of populations, occurrences, or area even over a few decades’ time. (Severity, scope, and/or immediacy of threat considered Insignificant.)

<td>Moderate</td>
<td>Insignificant</td>
<td></td>
</tr>
</tbody>
</table>

Comments Air pollution could be a major, imminent threat; elimination of the only large known population has major effect on known world population.

Number of Appropriately Protected and Managed Occurrences

Comments

Intrinsic Vulnerability
A = Highly Vulnerable. Species is slow to mature, reproduces infrequently, and/or has low fecundity such that populations are very slow (> 20 years or 5 generations) to recover from decreases in abundance; or species has low dispersal capability such that extirpated populations are unlikely to become reestablished through natural recolonization (unaided by humans). Ecological community occurrences are highly susceptible to changes in composition and structure that rarely if ever are reversed through natural processes even over substantial time periods (> 100 years).

Comments Population sizes are small. Apparently reproduction is slow for some reason.

Environmental Specificity
A = Very Narrow. Specialist or community with key requirements scarce.

Comments Oceanic.

Other Considerations

Edition 2/20/2003
Edauthor Daphne Stone (John Christy)
Grank S2S3
Grank Date 4/1/2004

Reasons
Few populations are known, most of them small; only 1 large population was known in late 2002, although more found in 2003. New occurrences are why the rank was dropped from S1 to S2S3.
