**Conservation Status Assessment**

**Scientific Name:** *Tricholomopsis fulvescens*  
**Classification:** Fungus  
**Assessment area:** California

**Heritage Rank:** S2  
**Rank Date:** 12/13/2018

Rank Reasons: 2018 update increases the number of occurrences and range of this species. One protected occurrence (2 collections there also, 1 km apart from 1982 and 1998).

**Range Extent:**  
D = 1,000-5,000 sq km (~400-2,000 sq mi)

Comments: There is one site of this species in California the Marble Mountains Wilderness Area of Siskiyou County documented in the Mycoportal.org database. The forest service database has a site mapped in Trinity County, California. In 2018 update there are 3-4 occurrences spreading from Siskiyou county to Tehama county for a total of around 2200 sq km.

**Population Size:** Not assessed  
Comments: None

**Number of Occurrences:** A = 1 - 5  
Comments: There are 2 known occurrence of this species in California. 2018 update brings this to at least 3, maybe 4 occurrences.

**Area of Occupancy:** C = 3-5 4-km2 grid cells  
Comments: This species occupies 3 grid square in California.

**Good Viability:** B = Very few (1-3) occurrences with excellent or good viability or ecological integrity  
Comments: One occurrence is in a wilderness area.

**Environmental Sensitivity:** B = Narrow. Specialist or community with key requirements common  
Comments: A saprotroph on well rotted conifer logs.

**Short Term Trends:** Not Evaluated  
Comments: None

**Long Term Trends:** Not Evaluated  
Comments: None

**Threat Impact:** C = Medium
Comments:
One known site is protected from timber harvest, but it could be threatened by climate change or wildfire. The Other may be threatened by timber harvest.

**Intrinsic Vulnerability:**
Not Evaluated

Comments:  None

**Calculated Rank:**
S2
